1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT & vector Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TCCCTAGCAGCAGTAGTCCTTCAAAATCGAAGAGCTTTAGACTTGCTAACCGCCAAAAGA 1179

1st strand cDNA was primed with a NoII-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with NoI I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a

lst strand cDNA was primed with a NotI.-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                BX378303 Homo sapiens PLACENTA COT 25-NORMALIZED Homo sapiens CDNA
                                                                                                                                                                                                                                                                                                        Bukaryota, Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Butheria; Primates; Catarrhini; Hominidae; Homo.

1st strand cDNA was primed with a NotI-oligo(dT) primer: Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1157 TAGACTTGCTAACCGCCAAAAGAGGGGGGAACCTGTTTATTTTAGGAGAAGAACGCTGTT 1216

4. sequence cns.fr

1. st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and Ecor V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BX388917 Homo sapiens PLACENTA COT 25-NORMALIZED Homo sapiens CDNA clone CSODI022YJ18 3-PRIME, mRNA sequence.

3 rue Gaston Cremieux de Sequence CDNA was Gigested with Not I and cloned into the Not I and ECGRY sites of the pCMVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen.

This sequence belongs to sequence cluster 4215.r

For more information about this cluster, see

Int strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
division of Invitrogen.

This sequence belongs to sequence cluster 4215.r

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a

AF520505S2 2694 bp DNA linear PRI 11-FEB-2004 Homo sapiens individual 37 allele A, envelope glycoprotein gene,

RESULT 10 AF520505S2 LOCUS DEFINITION

Eukaryofa, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

1 (bases 1 to 2694)
Mallet, F., Bouton, O., Frudhomme, S., Cheynet, V., Oriol, G.,
Bonnaud, B., Lucotte, G., Duret, L. and Mandrand, B.
The endogenous retroviral locus ERVWE1 is a bona fide gene involved in hominoid placental physiology
